Argentina is a federal country divided into 23 States (Provincias) and one autonomous city (Buenos Aires). These autonomous governments are divided into 2218 autonomous municipalities (municipios), with an exception for the City of Buenos Aires which is divided into 15 communes (comunas) subdivided into 48 neighborhoods (barrios). As the Provinces have a political, judicial, administrative and financial autonomy, the scope of municipal autonomy is determined by the Province they depend on, ahead of being defined by each municipal government through the drafting of municipal charters. According to the 1994 Federal Constitution of Argentina, Provinces can vote their own constitutions and laws. They have the power to elect their authorities and organize their own administrations of justice. The National Constitution also establishes the principle of municipal autonomy, which includes the election of their own authorities, Service Management and Public Works, the police authority, budget management and the ability to create taxes.

Main territorial organisation responsibilities. The delineation of powers between central government and the provincial states is based on the general principle that all provinces have the power that not delegated to the federal state by the Constitution. We can distinguish exclusive competences, and shared competences between federal state and the provinces. The provinces may create regions for socio-economic development or bodies with powers in order to achieve goals, and may also, with the knowledge of the National Congress, sign international agreements, to the extent that they would not conflict with the foreign policy of the Nation nor would affect the powers delegated to the Federal Government or the public credit of the Nation. The provinces also manage the natural resources within their territories and they may be responsible for secondary education. College education, health care, bus stations, housing and energy (electricity and gas) are competences shared between the federal government and the provinces. Municipalities have both exclusive and shared competences. Exclusive powers include waste management, roads construction, sewage, markets and cemeteries, public transportation and public roads regulation. They also share with the State level primary education, primary health care, water and sewerage, regional roads construction and maintenance. Finally, municipalities de facto provide for school buildings maintenance and health care services.

Subnational governments in Argentina are playing a major role in the financing and implementation of public policies. Being one of the most decentralized country on the continent, Argentina has made its provinces a key level for services delivery, and the share of subnational level to general government spendings is still growing. Provinces were responsible for 44.7% of total public expenditures in 2013 and municipalities for 5.3%. The weight of current expenditure in subnational budget is particularly important (91%), which leaves few share for public investments.
Due to the large share of subnational funding dedicated to operating current expenditures, the allocation of the rest of expenditures is very limited. Key sectors of expenditures of provinces are education and culture, health and social assistance.

Provinces in Argentina can perceive incomes from natural resources exploitation and from income tax and taxes on property and vehicles. They also receive funds from intergovernmental transfers coming from the federal state according to a principle of "coparticipation". Provinces in general have granted very few fiscal powers to their municipalities, which vary depending on the category of municipality and the provincial tax-sharing laws. Municipalities can perceive taxes on municipal services, on businesses, as well as an environmental taxes. In addition to these taxation revenues, municipal resources are constituted by subsidies aiming to support municipal services, and permanent transfers from the Provinces on which they are mostly relying.

**TAX REVENUE.** Tax revenues represent for the provinces the most important subnational financial resource in 2013, up to 85.3%. Provincial taxes, which represent in 2013 13.6% of total tax revenues, include: property tax, gross income tax, ownership, registry, use or transfer of automobiles, stamps and gift taxes, and taxes or provincial or municipal rates provided for in the rules on tax creation. On the other hand, few municipalities have the authority to collect taxes (Córdoba, Chaco, Chubut, Formosa, Salta), which represent 50% of their total revenues.

**GRANTS AND SUBSIDIES.** In Argentina, the Federal Tax-Sharing Law 23.548 assigns fixed percentages of funding allocated to each province, and does not establish specific percentages to be distributed to municipalities. On the other hand, the financial support of the Provinces to the municipalities is mostly going through the sharing of the disposable revenue base of each province. Each province establishes the composition and distribution of these revenues.

**OTHER REVENUES.** Other revenues make 31% of local revenues of municipalities. They differ from a municipality to another and can be raised through property rents, business licenses or user fees. Due to their fiscal limitations, municipalities most collect rates for public services: lighting, street cleaning, inspection, safety and hygiene, sanitation services, road maintenance, building permits, office rights, contribution of improvements, etc.

According to the constitution, provincial debt is subjected to provincial legislatures. Before the economic crisis of 2001, Argentina was one of the most decentralized country in terms of borrowing decentralization. The indebtedness weight has gradually decreased in the period 2003-2015, encouraged in 2010 by the Federal program for provincial governments debt reduction, yet with many disparities between jurisdictions. Since the end of the debt payment default in 2016, provinces have great expectations to return on international markets.
